

Q1: What is photosynthesis?

Ans: Photosynthesis is when plants turn sunlight into energy and make food for themselves.

Q2: Explain Newton's first law of motion?

Ans: Newton's law says that things don't move unless you push them or something acts on them.

Q3: What are the components of a computer system?

Ans: CPU, input and output units are parts of a computer, and memory stores data.

Q4: Define artificial intelligence?

Ans: It's when machines grow plants using sunlight and water like humans do.
